Data Analyst Business Case

Guided onboarding rollout | Option B candidate brief

The CPO must decide whether to expand, modify, or stop Guided Onboarding. Advise that decision using the available evidence.

Business context

TaskNest is a fictional productivity app with a 14-day free trial. On June 1, 2026, the product team began showing a new **Guided Onboarding** experience to a portion of new users. The original experience is labeled Classic.

Guided Onboarding helps users create their first project and tasks. The product team expected it to improve trial activation and paid conversion. Since launch, however, the company-wide dashboard shows lower activation and lower conversion than in the prior period.

Two other changes occurred during the observation window: a **Creator Campaign** began on June 1, and Android app version **3.2** changed task-creation instrumentation on June 20. No randomized experiment was created for the onboarding rollout.

Your assignment

Review the case materials and prepare the work product you would use to advise the CPO. You have autonomy to decide which questions matter, how to structure the analysis, and what format best supports the decision.

Your submission should be reviewable by another analyst. You will present the core recommendation in a follow-up interview and may be asked to revise it after receiving additional information.

Use of AI

Use of AI is allowed and expected. Use AI tools as you would in your normal professional workflow. You remain accountable for every number, assumption, claim, and recommendation.

Include a concise note, in any format you consider appropriate, explaining how AI influenced the work and how you validated the final result. Full prompt transcripts are not required.

Internal dashboard definitions

- **Activation:** at least one project_created event and at least three task_created events during the first seven days after signup.
- **Trial conversion:** a paid conversion recorded within 14 days of signup.

Available data

Two source files | Data extracted through August 7, 2026

trial_users.xlsx

Field	Description
user_id	Unique trial user.
signup_at	Trial signup timestamp. Signups run through July 31.
acquisition_channel	Recorded signup channel.
platform	iOS, Android, or Web.
onboarding_experience	Classic or Guided.
app_version	Version at signup.
trial_length_days	Trial duration.
monthly_price_usd	Offered monthly price in USD.
converted_at	Recorded paid-conversion timestamp; blank if no conversion is recorded.

product_events.xlsx

Field	Description
event_id	Unique product event.
user_id	User associated with the event.
event_at	Event timestamp.
event_name	Recorded product action.
app_version	App version attached to the event.

Submission and discussion

Submit by email the material to be presented, the decision-oriented work product and AI-use note. Also, a brief summary of its main conclusions and recommendations.
