TASKNEST · GUIDED ONBOARDING · RECOMMENDATION FOR THE CPO

Expand Guided Onboarding. The dashboard drop isn't caused by it.

+7.2 pp
Conversion vs Classic, same weeks
31.7% vs 24.6% · 95% CI +1.6 to +12.7

+31%
Revenue per trial
$4.73 vs $3.61

90 / 10
Rollout with a random holdout
To turn strong evidence into proof

1,800 trial sign-ups (Apr 1 – Jul 31, 2026) · 10,220 product events · all numbers recomputed with SQL from raw tables

Three changes landed at once, and the dashboard mixed them

Apr 1 — **Baseline: 100% Classic**

Jun 1 — **Guided rollout to ~60% of new users**

Not randomized

Jun 1 — **Creator Campaign starts**

Influencer traffic: 4% → 34% of sign-ups

Jun 20 — **Android 3.2 changes task tracking**

Tasks stop being logged

DASHBOARD: APR–MAY → JUN–JUL

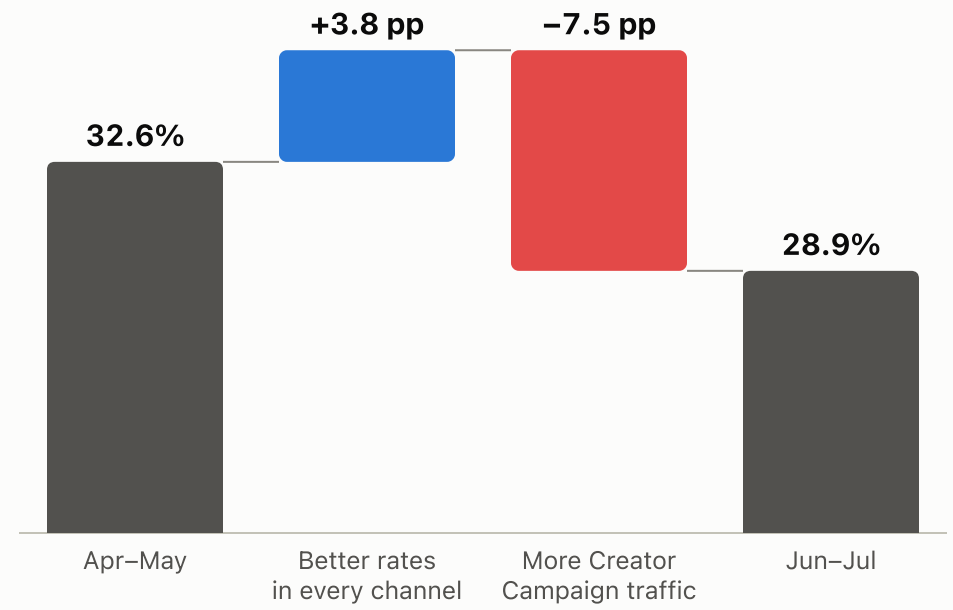

50.1% → 37.0%

Activation (7 days)

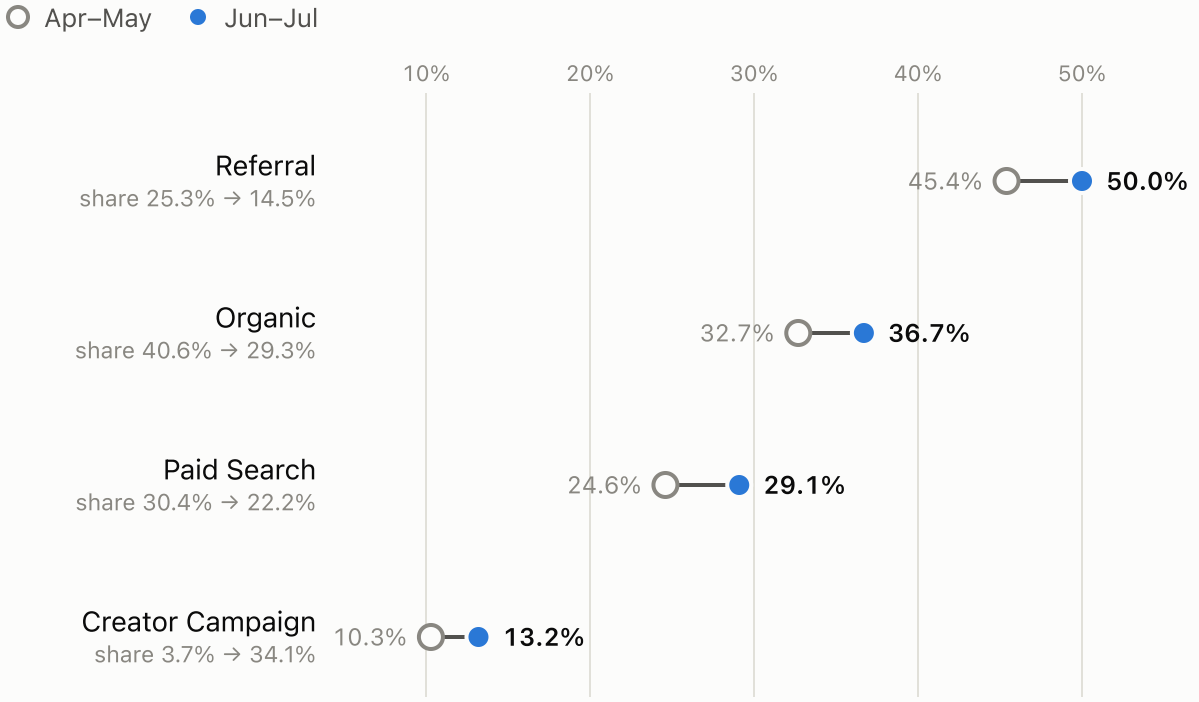

32.6% → 28.9%

Trial conversion (14 days)

The conversion drop is channel mix: every channel actually improved

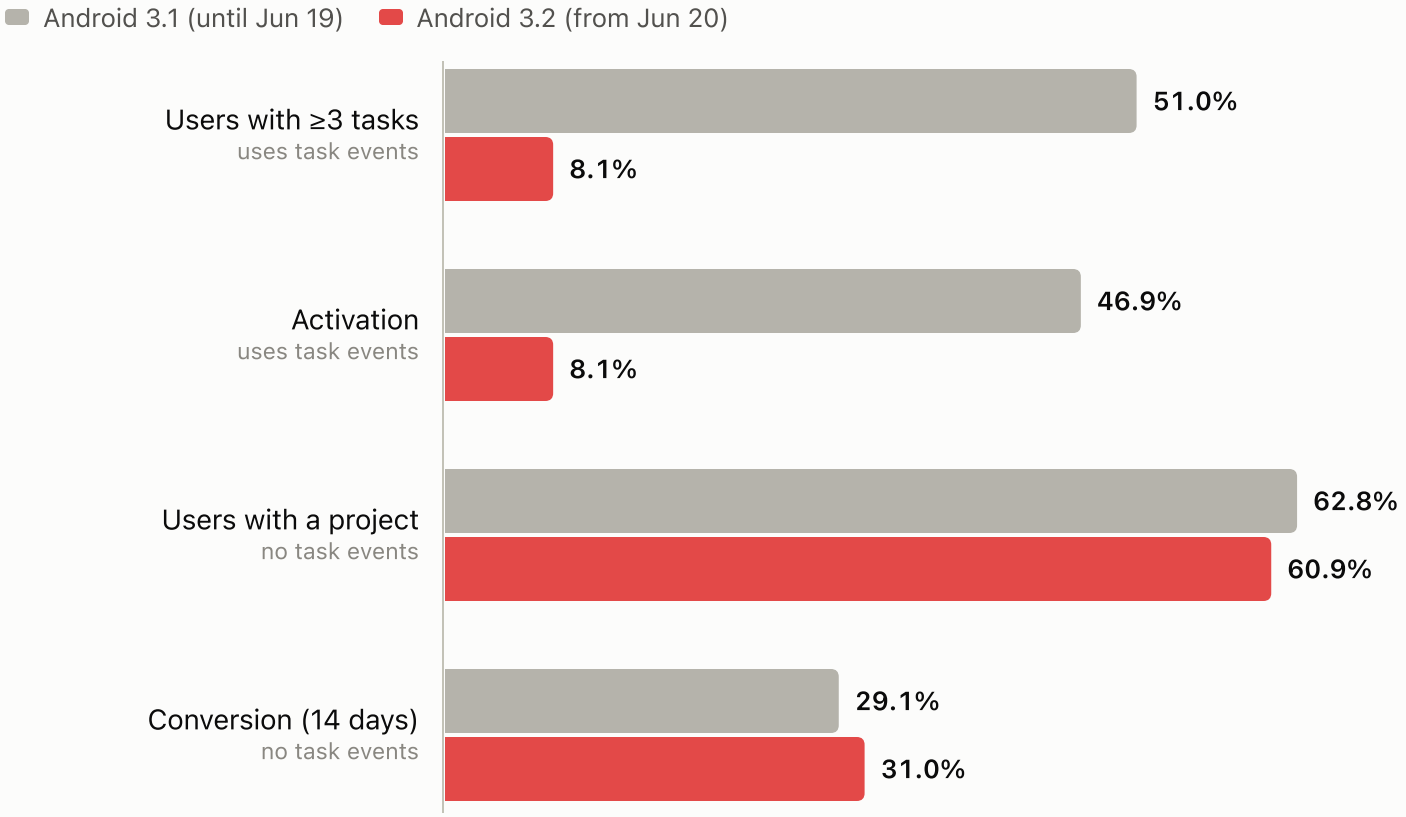

Trial conversion. Axis starts at 20%.

With the Apr–May channel mix, Jun–Jul conversion would be **36.8%**, not 28.9%.

The activation drop is a tracking bug in Android 3.2

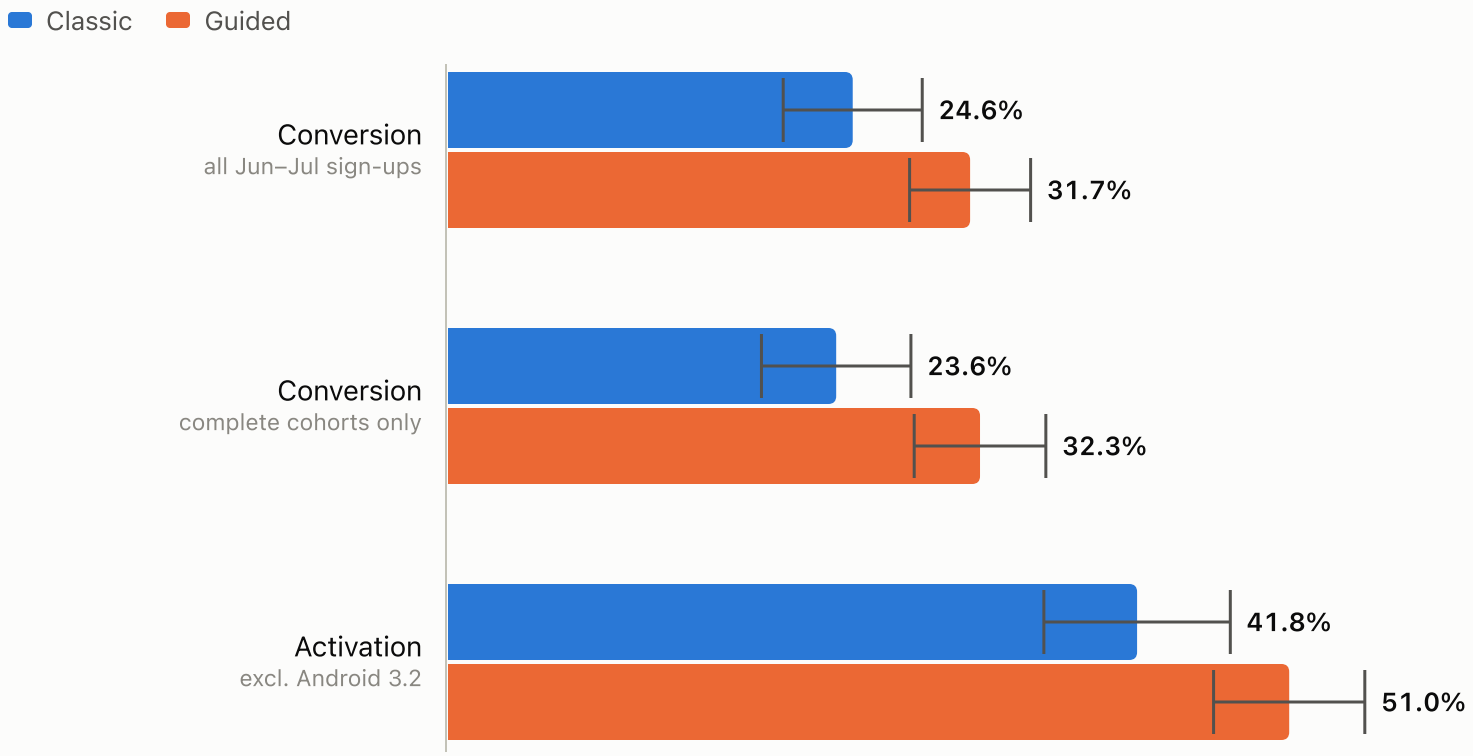

66.9% → 7.1%

Paying users who look “activated”

Users kept creating projects and paying. Only the task events disappeared.

In the same weeks, Guided converts and activates more

+7.2 pp
95% CI +1.6 to +12.7

+8.7 pp
95% CI +2.6 to +14.7

+9.1 pp
95% CI +1.9 to +16.4

Jun 1 – Jul 31 sign-ups. Whiskers: 95% CI.

+6.9 pp
controlling for channel × platform

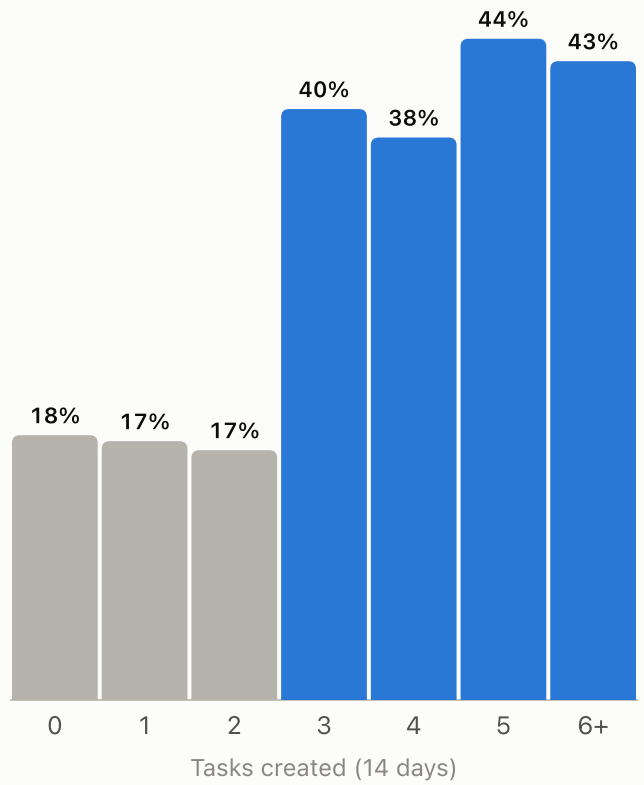

Flat
Classic before vs after, in every channel

4 of 4
platforms with Guided ahead

Observational
not randomized → keep a holdout

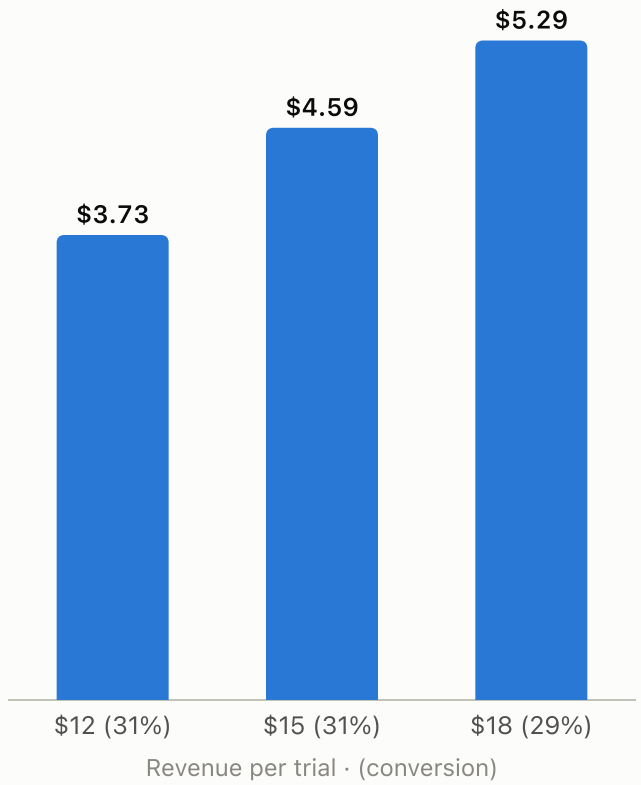

What we learned about our users

The 3rd task is the “aha” moment

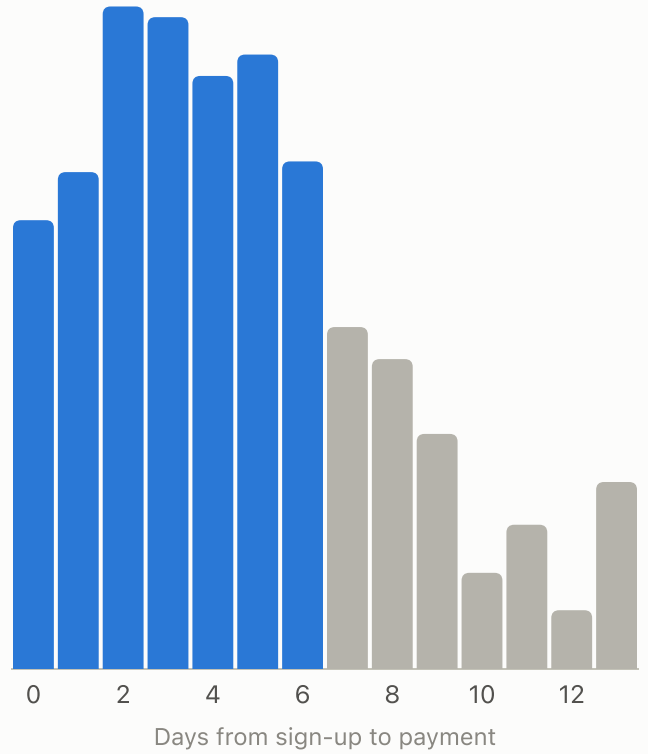

Conversion ~17% → ~41% at the 3rd task.

Price barely moves conversion

$18 earns +42% per trial vs $12.

Users decide in the first week

74% of payers pay within 7 days.

Recommendation: expand, measure properly, fix the instruments

Guided to 90% of new users, 10% random holdout.

≈ +39 paying customers / month at full rollout · +31% revenue per trial

Now	Fix Android 3.2 task tracking (P0)
Now	Rebuild the dashboard: by channel, complete cohorts, UTC
Month 1	Guided 2.0: get users to 3 tasks in 72 h
Month 1	Test $15 vs $18 with 90-day retention
Month 2	Test a 7-day trial · audit Creator Campaign CAC

What would change my mind

- Holdout lift below 2 pp after 6 weeks
- Guided users churn more in months 2–3
- Android activation doesn't recover after the fix

Appendix: definitions and data notes

Activation: ≥1 project and ≥3 tasks within 7 days of sign-up.

Conversion: paid ≤14 days after sign-up. Complete cohorts = signed up by Jul 24.

Revenue per trial: first-month price if converted, else 0 (not LTV).

Rate / mix split: $\text{Rate}_c = w_{post} \times \Delta r_c$; $\text{Mix}_c = \Delta w_c \times (r_{pre,c} - R_{pre})$. Sums exactly to −3.7 pp.

Confidence intervals: 95%, difference of two proportions. Controlled lift: 12 channel × platform strata.

Android 3.2: tasks per user 2.81 → 0.94; activation on 3.2 excluded where noted.

Clock skew: 1,928 events stamped before sign-up. Correcting it doesn't change Guided's lift (+7.4 vs +7.6 pp).

Incomplete cohorts: 122 users from Jul 25 lack 14 days; results hold on complete cohorts (+8.7 pp).

Price: assigned ~25/55/20 across all segments (natural experiment); elasticity −0.14.

Data: trial_users (1,800) and product_events (10,220) in PostgreSQL. Synthetic case data.
